

**Zapped And Win
Great Prizes**

About the Client

ZAPPit is an exciting fun game that merges the real world with the digital realm, offering players an immersive gaming experience.

With its cutting-edge mobile app, ZAPPit challenges players to quickly zap a variety of targets that appear on their screen, testing their reflexes and strategic planning skills. Moreover, instead of competing with graphic images on the screen, ZAPPit offers a lively competition between players.

With a focus on healthy competition and quick thinking ZAPPit offers an exhilarating gaming experience for gamers of any age. Zappit is available for download on both iOS and Android devices.

Challenges

ZAPPit faced a challenge with their mobile application framework, which was created a few years ago. The old technology was impeding the user experience and preventing the incorporation of new features.

To address this, ZAPPit was looking for a trustworthy technology partner that could upgrade their mobile application and integrate it with the old framework. The main challenge was to ensure a seamless integration while upgrading the application to deliver a more advanced user experience.

In addition, the upgraded mobile application needed to be compatible with different types of devices and operating systems. This required thorough testing and debugging to ensure optimal performance across various platforms.

Solution

After consulting with Zappit's management, Codora gained a thorough understanding of their challenges with the existing mobile application.

Codora proposed a complete restructuring of the mobile application using the latest technology stack and augmented reality capabilities.

The new application design focused on providing users with a stylish and intuitive interface, seamless game flows, and an immersive experience that would engage and appeal to Zappit's customers.

With Codora's expertise in mobile application development, they were able to successfully deliver a high-quality, feature-rich app that was intuitive, responsive, and offered a top-notch user experience.

The solution provided Zappit with a valuable upgrade to its mobile application, increasing customer satisfaction.

Technologies & Integrations

- **Back-end:** PHP, Laravel (Client Provided)
- **3rd Party Integrations:** In App purchases, Microsoft Face API, Firebase
- **Front-end:** Flutter Framework
- **Database:** MySQL (Client Managed)
- **Design/Communication:** Figma, Microsoft Teams

Results

- New and improved mobile application for iOS and Android
- Rich user experience
- Enhanced functionality
- Developed on latest technology stack

About Codora

Codora is a full-stack technology consulting and business process outsourcing company based in Copenhagen, Denmark. We provide an extensive range of cutting-edge technologies and customized services to aid our clients in optimizing their business operations, controlling costs, and increasing the efficiency of their processes.

Our clients come from diverse industries, including finance, healthcare, education, supply chain, technology, and retail. We have a deep understanding of both web2.0 and web3.0 technologies and how they can be leveraged to drive businesses forward. As a result, we are able to tailor our services to meet the specific needs of each client. We have regional offices in the UK, Canada and Pakistan, which enables us to support our global clientele effectively.
